

Keep with next across multiple builds

Setting `###Total###` in the footer causes a second build pass which caused headings to lose their `keepWithNext` setting, resulting in headings stranded at the bottom of a page.

This test passes if the PDF has two pages and the "Second section" title is at the top of page 2 and not at the bottom of page 1.

This should be the last line of page 1.

Second section

This paragraph forces the "Second section" title to render on page two.
